A Focus on Kirkland Lake Gold Exploration and Development

- 100% owned flagship property Miller Gold - located 18 km south of Kirkland Lake Gold's Macassa South Mine Complex.
- Property hosts significant “Kirkland Lake-style” near-surface high-grade vein and bulk-tonnage gold-telluride mineralization over 6 km² area.
- 270,000 oz gold historic high-grade gold resource estimate – open to expansion.
- 7,000 metre, 2 phase diamond drill program to commence Q4-2019.
- Post-IPO Share Structure: ~37 M.

**Brian Fowler, CEO, will be presenting on Friday,
September 6th at 10:50am**

KEYNOTE SPEAKERS

ERIC COFFIN

PUBLISHER,
HRA ADVISORIES

Eric Coffin has been publishing *HRA Advisories* for 20 years; this has given him the experience to identify market trends early and to understand exactly what a company needs to be successful. Thirty years of mining sector experience, from joint ownership of an exploration consultancy to sector wide data analysis and company specific advising on M&A, project selection, financing and market awareness give Eric the background to know what works.

He has been interviewed by and contributed to numerous international websites and news services providing commentary on finance, economics, markets and individual companies and exploration regions. Eric regularly speaks at a number of North American gold and resource conferences. He was one of the first analysts (along with David) to point out the disastrous effects of gold hedging and gold loan capital financing (1997) and to predict the start of the secular commodity bull market in commodities based on the movement of the US Dollar (2001) and the acceleration of growth in Asia and India.

GWEN PRESTON

PUBLISHER,
RESOURCE MAVEN

Gwen Preston launched *Resource Maven* after spending almost a decade writing about resource investing, most of it as a senior writer at *The Northern Miner*.

She understands which projects and pieces of news matter. She understands what it takes for a project to advance along the exploration-development-production path and what opportunities each stage offers.

She knows how the metals markets work, alone and within the global economy, and how to profit from commodity cycles.

Resources are Gwen's world and she seeks to pass that knowledge on to others. She is a scientist and journalist who has spent the last decade focused exclusively on metals and mining. Through investment experience, site visits around the world, endless self-education about economics and geology, and a strong network of friends and colleagues in the sector, she either knows or can figure out the answer to almost any metals and mining question.

JAY TAYLOR

EDITOR, J TAYLOR'S GOLD,
ENERGY & TECH STOCKS

Jay Taylor is the editor of *J Taylor's Gold, Energy & Tech Stocks* newsletter and host of the web-based radio show "Turning Hard Times into Good Times." In 1981 he began publishing his gold-orientated newsletter. His continuing interest in gold mining prompted him to study geology, supplementing his MBA in Finance and Investments. Throughout his career Mr. Taylor worked as a banker, including holding a job in the Mining and Metals Group of ING Barings in New York. In 1997 he resigned from ING Barings to devote himself full time to researching mining and technology stocks, writing his newsletter and assisting companies in raising venture capital.

JOHN KAISER

FOUNDER,
KAISER RESEARCH ONLINE

John Kaiser is the founder of *Kaiser Research Online*, an information portal covering the Canadian publicly listed resource sector, and the publisher of his Spec Value Hunter and Bottom-Fish recommendations. His analysis focuses on the four key narratives that drive the resource sector. John Kaiser is an independent analyst based in the San Francisco area who has covered the junior resource sector since 1983. After a decade working as a research director in Vancouver he left the brokerage industry in 1994 to launch *Kaiser Research Online* and create the “rational speculation model” as a tool to evaluate the speculative value of exploration projects. *Kaiser Research Online* is a subscription service that publishes his analysis, provides searchable information on over 1500 Canadian listed mining and exploration companies, and tracks trends within the junior sector and their relationship to macro trends.

GREG MCCOACH

THE MINING SPECULATOR

Greg McCoach is an ardent student of history and entrepreneur who has successfully started and run multiple businesses over the past 37 years. During the last 18 of those years, he has written his widely-followed newsletter, *The Mining Speculator* in search of exponential gains within the junior mining sector.

He is also founder and CEO of AmeriGold.com, a bullion dealer in its 19th year. He has appeared on national news channels and is a popular speaker at both private and public conferences.

Mr. McCoach’s philosophy is one of limited government, free markets, unrestricted freedom of speech and thought, and a celebration and defense of individual liberty.

**DRILLING NOW UNDERWAY AT THE BOLO ASSET
WITH RECENTLY COMPLETED SUCCESSFUL GEOPHYSICS**

About Bolo

- Located just off a major highway and accessible by car all year—Nevada
- Carlin type gold mineralization, similar to Pinson, Lone Tree/Stonehouse, and Turquoise Ridge/Getchell
- Significant exploration potential, where gold spreads into wall rocks along high-angle structures
- Two previous successful drilling campaigns
- Widespread gold mineralization at surface, along two parallel NS trending faults known

NEWSLETTER WRITER COMMENTARY ON EXHIBITING COMPANIES (IN ORDER OF PRESENTATION)

Tinka Resources Ltd.

TSX-V: TK ► tinkaresources.com
Phone: 416 884 3556 Email: rbruggerman@tinkaresources.com

Tinka Resources Ltd. is a junior exploration company based in Vancouver, Canada, that is developing its 100%-owned Ayawilca project.

The 170 square kilometre project is located 40 km northwest of Cerro de Pasco in the richly mineralized silver-lead-zinc belt of Central Peru.

“Investors aren’t interested in zinc at the moment but that doesn’t fix the fundamentals: the world is short on zinc. Stockpiles are at historic lows, mines are barely meeting demand, and there are very few zinc projects ready to be built into mines to fix the shortage in the future. Tinka’s Ayawilca project is one of the few: an advanced, economic, sizeable deposit in a mining-friendly part of Peru. There’s lots of exploration upside left at Ayawilca, so Tinka will continue to drill for new areas and high grade as it keeps Ayawilca moving towards production. In time, either a zinc major or the investing public - or both - will take notice of this undervalued asset.”

– Gwen Preston, Publisher, Resource Maven

Libero Copper & Gold

TSX-V: LBC ► liberocopper.com
Phone: 604 638 2545 Email: info@liberocopper.com

Libero Copper & Gold is acquiring high-quality copper and gold deposits with significant resources but without any fatal flaws or significant holding costs and exceptional copper-gold exploration properties in the Americas. These assets are being advanced and de-risked by a seasoned team to minimize dilution and maximize shareholder value. The portfolio currently includes the Tomichi deposit in the United States which contains an inferred mineral resource of 711 million tonnes at a grade of 0.33% copper equivalent, the Mocoa deposit in Colombia which contains an inferred resource of 636 million tonnes at a grade of 0.45% copper equivalent and the Big Red exploration property in Canada. In total the properties contain 7.9 billion pounds of copper and 1.1 billion pounds of molybdenum.

“Libero was established in 2016 as a vehicle to collect big, cheap copper projects with no fatal flaws. They did just that, adding two projects with large resources, but most recently the team found Big Red, a large road-accessible land package in the Golden Triangle. Prospectors identified copper and gold at Big Red 150 years ago but divided ownership and scattered work programs meant the area never stood out...until a local geo pulled the project together and Libero synthesized all the historic work and ran some geophysics. The effort outlined a clear mag high with a

strong coincident gold- and copper-in-soil anomaly. Long story short, Libero is about to drill test Big Red for the first time ever and if it is the porphyry that it appears to be then the market will sit up and pay attention”.

– Gwen Preston, Publisher, Resource Maven

Integra Resources

TSX-V: ITR ► integraresources.com
Phone: 604 416 0576 Email: info@integraresources.com

Integra Resources Corp. is a development-stage company engaged in the acquisition, exploration and development of minerals properties in the Americas. The primary focus of the Company is the advancement of its DeLamar and Florida Mountain Gold-Silver Deposit on the DeLamar Project in the heart of the historic Owyhee County mining district in southwestern Idaho. The management team comprises the former executive team from Integra Gold Corp.

“Integra is exactly the kind of company you want to own in a rising gold market. The Delamar project has a large, near surface gold resource at a brownfield site; years of historic operations left behind ample data on metallurgy and geology plus a community comfortable with a mine in their area. And the way Integra is advancing this asset means it will produce two kinds of excitement: clear value as Delamar moves closer to strongly economic production and exploration results as Integra tests this property as it’s never been explored before. Add to that a successful team with an enviable M&A record, a strong shareholder registry, clear access to capital, and an increasingly popular jurisdiction and you have a stock that will attract a lot of attention as this gold market grows.”

– Gwen Preston, Publisher, Resource Maven

Northstar Gold Corp.

CSE: NSG ► northstargoldmining.com
Phone: 403 200 3569 Email: dwood@conduitir.com

Northstar Gold Corp is focused on the exploration, development and acquisition of quality exploration properties in the prolific Abitibi Greenstone Belt. Our flagship Property is the Kirkland Lake / Lam-aque “style”, historic resource-stage Miller Gold Property, located 18km southeast of Kirkland Lake, Ontario.

“North Star is preparing to list after operating privately for 10 years. They are coming public because the Miller project is ready for ready for serious action. Miller is in the prolific Kirkland Lake gold camp but was long overlooked because it sits on a splay off

the major fault. But historic work defined good zones of high-grade gold in flat lying veins. Since acquiring the asset in 2012 North Star has also defined broad intervals of low grade gold as well as high-grade in steep veins. Long story short: there is good reason to believe Miller might host a large gold deposit cut with high-grade veins, all on a road in a popular gold camp. North Star isn't yet well known but with a tight share structure and a prospective, drill-ready project this one could get exciting."

– Gwen Preston, Publisher, Resource Maven

Westhaven Ventures

TSX-V: WHN ▶ westhavenventures.com

Phone: 604 681 5558 Email: info@westhavenventures.com

Westhaven is focused on the identification, acquisition and advancement of earlier stage projects that have the potential to host major discoveries. Acquisition Profile: High potential

geological environments Mining friendly jurisdictions with low political risk Proximity to infrastructure Reasonable acquisition or earn-in costs.

"Westhaven Ventures is in the middle of a 20,000-metre drill program at its Shovelnose project in SW British Columbia. Results have been positive, with the Zones 1 and 2 extended and at least one new zone, Zone 3 added. Zones are still wide open. Shovelnose was one of the best gold discoveries made anywhere in 2018. WHN is hard at work with two drills on site with results expected through the remainder of the year. Shovelnose can be drilled virtually year-round so the good news should keep coming."

– Eric Coffin, Editor, HRA Advisories

Great Bear Resources

TSX-V: GBR ▶ greatbearresources.ca

Phone: 604 646 8354

High-Grade Discovery – August 2018; 16.35 m of 26.91 g/t gold and 7.00 m of 68.76 g/t gold in two

holes, near surface, at Dixie Project Fully Funded – \$10M financing closed September 2018, including \$5.7M from Rob McEwen & McEwen Mining Ongoing Drilling – 30,000 metres of drilling at Dixie Project in Q4 2018-2019 Tight Share Structure – 36M shares outstanding. Heavily Invested Management Team.

"Great Bear doesn't need introduction to most of you. It's arguably the most successful gold exploration stock anywhere. With good reason. GBR is completing a 90,000-metre drill program at its Dixie project in Red Lake. It just keeps finding new high-grade zones and news types of zones. Fully funded with a very tight share float, GBR doesn't need to raise funds for at least a year, even given the high activity level in the field. With a growing list of growing gold zones on a project with low costs and excellent in-

frastructure, Great Bear seems destined to be one of the premier stories of the exploration sector this decade."

– Eric Coffin, Editor, HRA Advisories

Precipitate Gold

TSX-V: PRG ▶ precipitategold.com

Phone: 604 558 0335 Email: investor@precipitategold.com

Precipitate Gold Corp. (PRG) is a Vancouver British Columbia based company focused on gold and base metal exploration in the Dominican Republic. The

Company's flagship asset, the Pueblo Grande Project offers a district-scale land package strategically located immediately adjacent to Barrick's Pueblo Viejo mining operation, which is one of the largest gold mining operations in the world.

"PRG pulled off a coup late last year, acquiring a 100% interest in a large project, Pueblo Grande, surrounding Barrick/Goldcorp's Pueblo Viejo mine, one of the largest gold mines in the world. PRG has spend most of this year carefully generating and upgrading drill targets, working with world renowned geologists. It just announced the drill targets for its maiden drill program at Grande. Drill permits are immanent. With one of the strongest technical boards around and an early stage drill program next to a world-class mine, I expect Precipitate to get a lot of attention as it seeks new gold discoveries there in this new gold bull market."

– Eric Coffin, Editor, HRA Advisories

Minera Alamos

TSX-V: MAI ▶ mineraalamos.com

Phone: 416.306.0990 Email: info@mineraalamos.com

Minera Alamos is an advanced-stage exploration and development company with a

growing portfolio of high-quality Mexican assets, including the La Fortuna open pit gold project in Durango with positive PEA completed (permits awaiting issuance) and the Santana open pit heap-leach development project in Sonora with test mining and processing completed with approved EIS. The Company expects to start up construction at Santana in 2019 with the first gold production expected for mid-2020 and advancing La Fortuna in to construction in 2020.

"Minera Alamos is focused on becoming a 100,000-ounce gold producer over the next 24 months. It's two flagship projects in Mexico, Santana and La Fortuna, already have major mining permits in place. Santana is an ultra-low capex heap leach mine that is scalable and has a short construction period. I expect MAI to announce final construction finance plans for Santana immanently, which should include little or no equity dilution. Once Santana is up and running next year, the team will move to start construction at La Fortuna. The key attribute for a company like Minera is execution. This is a management team that has build

other highly successful mines in the region on time and under budget. I expect the same outstanding performance from MAI.”

– Eric Coffin, Editor, HRA Advisories

Trilogy Metals Inc.

TSX: TMQ ▶ trilogymetals.com

Phone: 604 638 8088 Email: info@trilogymetals.com

Trilogy Metals Inc. is dedicated to advancing exploration at the Upper Kobuk Mineral Projects, high-grade copper-zinc-lead-gold-silver-cobalt properties in Northwest Alaska. Our Company was originally named NovaCopper, which was incorporated in April 2011 as a wholly-owned subsidiary of NOVAGOLD RESOURCES INC. (“NOVAGOLD”). Effective April 30, 2012, NOVAGOLD distributed to its shareholders, on a pro-rata basis, all of the issued and outstanding common shares of NovaCopper, following which, NovaCopper was no longer a wholly-owned subsidiary of NOVAGOLD.

“Trilogy Metals is a well-funded junior mining company focused on the exploration and development of the Ambler District for copper-zinc-silver-gold and cobalt of western Alaska. The company’s most advanced project is the pre-feasibility stage Arctic volcanogenic massive sulfide copper deposit followed by the resource stage Bornite copper project. The company’s fortunes are tied up with two critical catalysts—the record of decision on the Ambler Road and the consummation of its joint venture with South32 (S32.ASX).”

– Joe Mazumdar, Economic Geologist/Analyst, Exploration Insights

Osino Resources Corp.

TSX-V:OSI ▶ osinoresources.com

Phone: 604 785 0850 Email: info@osinoresources.com

Osino Resources is making a major mark on Namibian gold exploration with its vision to find Namibia’s next significant gold deposit. Osino Resources Corp. (TSX-V: OSI, FSE: R2R1) is a Canadian company, focused on the acquisition and development of gold projects in Namibia. Osino has a total license position of approximately 7,500 km², comprising 22 exclusive exploration licenses located within the Central and Northern zones of Namibia’s prospective Damara gold belt.

“Osino Resources has a large land package (>7,500 sq. km.) in the Damara gold belt of Namibia in southwest Africa. Its management team has a track record of taking several assets through to acquisition including the Ojikoto gold mine by B2Gold (BTO.T), also in Namibia. It is transitioning from early-stage exploration to resource development stage at its flagship Twin Hills project within the next few months. It has several high profile shareholders including Ross Beaty (18%).”

– Joe Mazumdar, Economic Geologist/Analyst, Exploration Insights

Columbus Gold

TSX: CGT

▶ columbusgold.com

Phone: 604 634 0970 Email: info@columbusgold.com

Columbus Gold is a leading gold exploration and development company operating in French Guiana, France. Columbus’ principal asset is a major interest in the world-class Montagne d’Or Gold Deposit, which hosts NI-43-101 Proven and Probable Reserves of 2.75 million ounces gold (54.11 million tonnes @ 1.58 g/t gold). The Feasibility Study completed in 2017 contemplates an open pit mining operation with average annual gold production of 237,000 ounces over the first 10 years of mine life at an average grade of 1.73 g/t gold that results in an average AISC of US\$749 per ounce. There is considerable expansion potential on strike and at depth. Permitting is underway.

“Columbus Gold has a JV with a private Russian gold producer, Nordgold, on the feasibility stage Montagne d’Or open pit gold project in French Guiana. Important catalysts include the renewal of core mining concessions, completion of technical studies, and, critically, reforms to the French Mining Code, which directly impact the permit application by the JV partners. In the meantime, the company will advance its other projects in the country (Maripa and Rhea).”

– Joe Mazumdar, Economic Geologist/Analyst, Exploration Insights

Kootenay Silver Inc.

TSX-V: KTN

▶ kootenaysilver.com

Phone: 604 601 5650 Email: investor@kootenaysilver.com

Kootenay Silver Inc. is a Canadian and Mexican based silver exploration company actively engaged in the development of two major silver projects in Mexico, including the La Cigarra Silver project in Chihuahua, and the Promontorio and La Negra silver discovery in Sonora, Mexico. The Company has a leading growth profile highlighted by one of the largest junior owned silver asset bases in Mexico and a large generative portfolio of precious metals exploration projects located in Canada and Mexico.

“Kootenay Silver is focused on precious metal deposits in the Sierra Madre District of western Mexico. It holds several low-grade silver deposits (La Cigarra, Promontorio, La Negra) which have significant leverage to the silver price. It has also acquired a couple of potential high grade, untested silver projects (Columba and Copalito) and is currently drilling Columba. It completed a financing recently for C\$5 million with Eric Sprott to fund its program.”

– Joe Mazumdar, Economic Geologist/Analyst, Exploration Insights

Brixton Metals Corp.

TSX-V:BBB

► brixtonmetals.com

Phone: 604 630 9707 Email: info@brixtonmetals.com

Brixton Metals Corporation is a precious metals exploration and development company focused on advancing its wholly-owned projects toward mine development. The company was listed in December of 2010. The Company is seeking JV partners for one of more of its projects.

“On July 15 management announced Hole THN19-150 on the Thorn property intersected 554.7 meters of 1.97 g/t AuEq. Mineral composition in that hole included 554.70 metres of 0.57 gram per tonne (g/t) gold, 0.24 per cent copper, 43.18 g/t silver, 0.55 per cent zinc and 0.28 per cent lead. The hole which was drilled vertically through a diatreme breccia pipe ended in mineralization. The target here was a deep porphyry so the presence of an increase in porphyry-type veined clasts from 185 metres depth and sulphide-mineralized porphyry clasts from 429 metres to 677 metres, indicates porphyry affinity is promising. Thorn is one of several highly prospective and exciting properties in Brixton’s portfolio.”

– Jay Taylor, Editor, J Taylor’s Gold, Energy & Tech Stocks

Avino Silver & Gold

TSX: ASM

► avino.com

Phone: 604 682 3701 Email: ir@avino.com

Avino Silver & Gold Mines operates two silver mines in Mexico with a gold project under development in British Columbia. Through Avino’s 50-year history, our innovative and pioneering approach has fostered resilience, initiative, enterprise and long-term relationships while shaping Avino into one of the industry’s lowest-cost silver producers.

“Avino Silver & Gold operates two silver mines in Mexico with a high grade gold project under development in British Columbia. With marginally profitable underground silver mining operations in a silver bear market, Avino represents a leveraged play on silver that seems to be starting its traditional catch up move with gold during precious metals’ bull markets. The historically high grade Bralorne mine in BC is being developed for the first time using modern exploration techniques. Despite its 50-year history, the company has a mere 76 million shares outstanding. The upside share price potential appears substantial with silver heading higher.”

– Jay Taylor, Editor, J Taylor’s Gold, Energy & Tech Stocks

Balmoral Resources

TSX:BAR

► balmoralresources.com

Phone: 604 638 3664 Email: jfoulkes@balmoralresources.com

Balmoral is a proudly Canadian exploration and development company focused on creating shareholder value through the discovery, aggressive exploration and development of high-grade gold and base metal assets in the major mining districts of Canada. Canada, and in particular the province of Quebec, offers a virtually unparalleled combination of accessibility, exploration and mining expertise, legal and tenure certainty, mining culture, and geological opportunity.

“Balmoral Resources has been focused on gold exploration until it “accidentally” discovered its Grasset Nickel deposit during the recent gold bear market. 2016 Indicated Resource Estimate: 3.5 million tonnes @ 1.56% Ni, 0.17% Cu, 0.03% Co, 0.34 g/t Pt and 0.84 g/t Pd, open to depth and along strike. Balmoral has since staked ground all along the Grasset ultramafic complex. It strives to become the dominant nickel player in Canada. Meantime drill results next door on Area 52 on the Fenelon Mine property along the Area 51 corridor have intersected both broad low-grade and narrow high-grade gold mineralization within 300 meters of Balmoral’s property holdings. Visual observation of holes drilled by Balmoral has management excited. Investors are awaiting assays.”

Forum Energy Metals Corp. is a Canadian-based mineral resource company focused on the acquisition, exploration and development of energy metals: copper, cobalt, and uranium. The Company’s operates mostly in Saskatchewan, Canada’s #1 rated mining jurisdiction and #2 in the world. Forum recently entered into an option agreement with Rio Tinto Canada to explore the Company’s 52km District wide Janice Lake sedimentary copper project. Rio Tinto has initially committed \$3 million in exploration expenditures over the next 18 months. Forum also holds majority interest in seven drill ready uranium projects in the prolific Athabasca Basin, the most valuable uranium real estate in the world, and in 2018 gained a strategic foothold in Idaho’s cobalt belt with the acquisition of the Quartz Gulch exploration property. Forum’s technical team are experienced and committed exploration professionals with an established track record of mine discoveries. Forum’s goal is to discover near surface mineral deposits by exploring its 100% owned properties and through strategic partnerships and joint ventures.

“Forum Energy Metals Corp, headed by Rick Mazur, offers exposure to three distinct discovery exploration tracks focused

on northern Saskatchewan. The flagship is Janice Lake, a sediment-hosted copper-silver system discovered during the 1960's but never looked at on a district scale which attracted Rio Tinto in 2019 with a deal to earn 80% for \$30 million over 7 years. Rio is drilling 25-30 holes in 2019. The second track is the Love Lake mafic complex staked in 2019 which has geochemical evidence for nickel-copper-platinum group mineralization whose potential has seen little exploration, especially in terms of a high palladium price. The third track is a portfolio of Athabasca Basin uranium prospects on which Forum and partners spent \$50 million during the 2005-2013 boom cycle which would receive renewed interest if uranium bugs ever stop being wrong."

Orestone Mining Corp.

TSX-V: ORS ▶ orestone.ca

Phone: 604 629 1929 Email: info@orestone.ca

Orestone explores for gold and copper in British Columbia, Canada and Chile. In BC the 72 square kilometre Captain gold/copper

porphyry project is 100% owned and hosts several large targets advanced through geophysics and drilling. Our focus in 2019 will be to advance the significant discovery made on the Captain project through previous exploration drilling. In the country of Chile, the Resguardo copper project covers 2,905 hectares under mining concessions with historic production of high grade near-surface copper (>1-2% Cu) in the same metallogenic belt as El Salvador and Potrerillos copper mines operated by CODELCO.

"Orestone Mining Corp is the relaunch vehicle for key people involved with Bema's Refugio project during the late eighties before they split off on different paths. Orestone went public on 2008 with the Captain copper-gold porphyry play in British Columbia where the overburden covered property was explored for a Mt Milligan look-alike. David Hottman and Gary Nordin, who launched Eldorado Gold during the nineties, took charge of Orestone in 2011 and conducted several drill programs until the bear market hit in 2013. The Captain has yielded plenty of smoke, but a close look at the last hole of 2013 forced a rethink of Captain's potential in terms of a Red Chris style deposit within the large untested Admiral target which will be drilled in the fall of 2019. The main focus, however, emerged in 2018 with the option of the Resguardo copper play in Chile which has been mined for skarn hosted high grade copper. Resguardo was brought to Orestone by Julia Aspillaga and Patrick Daniels who are now part of Orestone. The goal is to find the underlying porphyry system whose potential location has been highlighted by an untested IP anomaly."

Rugby Mining Ltd.

TSX-V: RUG ▶ rugbymining.com

Phone: 604 688 4941

Rugby Mining Limited is a Canadian public company listed on the TSX Venture Exchange ("TSX-V") under the symbol RUG. Rugby is focused on its exciting portfolio of Projects in the Philippines, Australia and Colombia but particularly on The Motherlode Gold Project, Surigao Del Norte, Philippines.

"Rugby Mining Ltd is run by the team behind Exeter (Caspiche) and Extorre (El Morro), two discovery successes in Chile and Argentina that were bought out during the past decade. Yale Simpson and Bryce Roxburgh steered Rugby into the Philippines (Motherlode) and Colombia (Cobrasco) in 2010 but hit the wall with permitting and title granting delays. In 2019 Rugby finally got a green light to drill the Motherlode project, a former high grade gold mine where the target is an underlying porphyry system. A drill program begun in July will determine the fate of the Motherlode project. With regard to Colombia Rugby got a permanent red light on the Cobrasco copper play in 2019, but Rugby still has in its back pocket the Sorotama portfolio it acquired in 2016 when Barrick gave up on Colombia after spending \$20 million over a decade on targetting work. This portfolio consists of pending license applications hung up in Colombia's dysfunctional mineral title system, so this is a patience story for Rugby. The new emerging focus is the El Zanjón low sulphidation epithermal gold-silver prospect in Argentina south of Anglo Ashanti's Cerro Vanguardia Mine. El Zanjón has seen little work because the geology is hidden under gravel cover, but magnetic data suggests a promising structural context Rugby will target with grassroots exploration."

Golden Predator

TSX-V: GPY ▶ goldenpredator.com

Phone: 604 260 0289 Email: info@goldenpredator.com

Golden Predator is advancing the past-producing Brewery Creek Gold Mine towards a timely resumption of mining activities, under its valid Quartz Mining and Water Licenses, in Canada's Yukon. With established resources grading more than 1.0 g/t Gold and low capex

to production in a safe first world jurisdiction, the turnkey Brewery Creek Mine has a clear path to production as an economically and environmentally proven project. Optimization studies are progressing to enhance the already positive multi-phase project economics described in the 2014 Preliminary Economic Assessment. Drilling continues to expand the numerous open ended resources and untested targets across the 186 km² brownfield property.

"Golden Predator is advancing the past-producing Brewery Creek Gold Mine towards a timely resumption of mining ac-

tivities, under its valid Quartz Mining and Water Licenses, in Canada's Yukon. With established resources grading more than 1.0 g/t Gold and low capex to production in a safe first world jurisdiction, the turnkey Brewery Creek Mine has a clear path to production as an economically and environmentally proven project. Optimization studies are progressing to enhance the already positive multi-phase project economics described in the 2014 Preliminary Economic Assessment. Drilling continues to expand the numerous open ended resources and untested targets across the 186 km² brownfield property. At 3 Aces, Golden Predator continues to expand on discoveries of native gold in quartz veins while ongoing bulk sampling and processing at our 50 tpd Company-owned processing plant has demonstrated gold recoveries of over 85% using a chemical-free process. This green gold provides the gold for the mintage of .9999 gold coins from the Yukon Mint™, a wholly-owned subsidiary of Golden Predator. •Advancing projects with significant exploration upside, good infrastructure and community support •The Yukon Mint™, a wholly-owned subsidiary, producing .9999 Gold coins and bars •1st Yukon pilot processing plant testing chemical free processing •Aligned with shareholders, committed to community.”

First Vanadium Corp.

TSX.V: FVAN ▶ firstvanadium.com
Phone: 604 340 7711 Email: pcowley@firstvanadium.com

First Vanadium's Carlin Vanadium Project Contains One of North America's Largest Richest Primary Vanadium Deposits, located in Nevada

(Source: USGC Professional Paper 1802). Its West Jerome Project Targets a Large Scale High Grade Copper and Zinc Deposit in Arizona. Advancing its advanced-stage Vanadium Project to a Preliminary Economic Assessment During a Trend of High Vanadium Metal Prices and Demand.

“Nowadays, vanadium flow batteries are not science fiction, but a real thing. With many countries seeing the need for reliable energy storage on an industrial scale to go with their renewable energy projects, we see vanadium heading higher. These batteries use a lot of metal. We see Cornerstone (now called First Vanadium) as a perfect candidate to benefit. It's worth stressing that this is a bet on a powerful trend—not a science project. Shares are not as cheap as they were a year ago, but the company has delivered strong drill results validating the project. And we like the zinc and silver linings.”

Barrian Gold

TSX-V: BARI ▶ barrianmining.com
Phone: 604 620 8406 Email: info@barrianmining.com

Barrian Mining Corp is a new junior exploration company focused on acquiring proven gold assets in the United States. Barrian is composed of successful public market entrepreneurs whose goal is to create value for shareholders through the drill bit.

“Barrian Mining Corp. a company that I've been following since began trading in late April. The short story is that Barrian optioned the Bolo project in Nevada from Allegiant Gold. While Allegiant and previous operators had gotten some interesting drill results from earlier work on Bolo, including 1.28 g/t gold over 133 meters from surface, no one had been able to put the geological story together. But Barrian has just recently completed a significant geophysical survey of the property which, in combination with a new geological interpretation, has identified multiple anomalies along a 1.1-kilometer-long strike. I think these results, and the developing market environment, are going to raise Barrian's profile in the near term.”

KORE Mining Ltd.

TSX-V: KORE ▶ koremining.com
Phone: 1 888 407 5450 Email: info@koremining.com

KORE offers exposure to precious metals exploration and development in North America. KORE owns 100% interests in the Imperial and Long Valley gold development projects, located in California, USA and the FG Gold and Gold Creek exploration projects, located in the Cariboo region of British Columbia, Canada. Combined, the Company's projects boast multimillion ounce gold development opportunities. Each of the development projects has the potential to host near-surface, open pit, heap leachable gold deposits. Our exploration projects demonstrate strong discovery potential in an established mining district. The Projects combine low technical risk and high advancement potential.

“KORE is tailor made for this gold market. For pennies on the dollar the Kore team built a portfolio of projects that have seen already huge amounts of work but got forgotten in the bear market. The flagship asset is Imperial, a gold project in California with 2M established ounces that were taken to feasibility level in the past. Kore's opportunity is to modernize the resource and studies and remind the market that this deposit makes good economic sense on its own...or as a bolt-on to the Mesquite mine 10 miles down the road. In addition to Imperial Kore has Long Valley, another California asset with over 1.5M oz. oxide gold, and several projects in BC with known resources and significant exploration potential. Kore's team is experienced and successful – and focused on creating value for shareholders.”

Prime Mining Corp.

TSX-V: PRYM ▶ primeminingcorp.ca

Phone: 604 428 6128 Email: info@primeminingcorp.ca

Gold and silver were discovered at Los Reyes by the Spanish in the late 1700s and mining occurred in the area for over 150 years up until the 1950s. It is estimated to have produced 500-600,000 oz of gold and 40M oz of silver at reported grades of +10 g/t Au and +500 g/t Ag. Modern exploration began at the Los Reyes area in the

1990s and was targeted at defining shallow and lower-grade gold-silver mineralization. To-date, over 40,000m of RC and core drilling have been completed within the project boundaries. Los Reyes has significant resource upside with open extensions to known resources as well as eight additional discrete exploration targets.

“Prime Mining is a new story, a company transformed in order to push the Los Reyes gold project into production. Los Reyes has four deposits of near surface oxide gold - and high grade gold, for that kind of deposit. The deposits are open for expansion and almost ready to be mined. Prime thinks it can build a 60,000-oz. per year mine at Los Reyes in two years for less than US\$15 million. That the company just raised \$6 million without problem means lots of investors think so too. In a good gold market a segment of investors gravitate to “quick to production” stories and Prime is perfectly positioned to capture all that attention.”

HighGold Mining Inc.

TSX-V: HIGH ▶ highgoldmining.com

Phone: 604 629 2348, Ext 1413

Email: information@highgoldmining.com

HighGold Mining is a newly minted gold exploration company with a flagship high grade gold project that is both new and

“well-advanced” – the Johnson Tract property in south-central Alaska; a high-grade historic gold producer in Timmins, Ontario (Munro-Croesus property), and two other Timmins gold properties with exceptional gold exploration potential. All properties are 100%-owned. HighGold is well-financed and will be listed on the TSX-V to begin trading by mid-September.

“High Gold Resources will be familiar to those who have followed the Constantine Metals story. HIGH is a spinout from Constantine that holds all the former Constantine gold projects, including Johnson Tract in Alaska, and Croesus in Ontario. The combination of projects in two areas removes the seasonality issue that plagues northern explorers, since the Ontario projects could be drilled as easily in winter as summer. Johnson has reported numerous spectacular high-grade gold intercepts with room for more, while past workers at Croesus found “ultra high grade” collector grade gold zones. HIGH will be very well funded after its pending listing and will have a very small share float.”

Western Copper and Gold Corp.

TSX: WRN ▶ westerncopperandgold.com

Toll Free: 1 888 966 9995 (Canada and USA)

Phone: 604 684 9497 Email: info@westerncopperandgold.com

Western Copper and Gold Corporation is developing the Casino project into Canada's Premier Copper-Gold Mine.

Western Copper and Gold Corporation is a public company that trades under the symbol “WRN” on the Toronto Stock Exchange (TSX: WRN) as well as under the symbol “WRN” on the New York Stock Exchange American (NYSE American: WRN).

“WRN is advancing Casino, a massive copper-gold resource in Yukon. Its scale and advanced stage - permitting is nearing completion and a second feasibility study is due out next year - make it a rarity in the mining world, where lack of capital in the bear market stopped so many projects in their tracks. It will attract attention from major miners that need to restock their production pipelines. And to boot it's in Yukon, a supportive and low risk mining jurisdiction.”

MINERA ALAMOS

Proven Mine Development Team

Building The Next Mid-Tier Gold Mining Company

SANTANA *permitted*

- **100% Owned**
 - Bulk test mining phase completed
 - Preliminary engineering and design completed
 - Substantial exploration upside
 - EIS approved– start up construction late-2019
 - Production is expected mid-2020
-
- Strong operational expertise in heap leach mining
 - **3 successful gold mines into production** in the last 12 years
 - **2 high-quality, open pit development-stage assets** with low CAPEX requirements and near-term production
 - Cornerstone financial and technical partner – **Osisko Gold Royalties** the largest shareholder of the Company (~13%)
